SPARTAN DOORS™

EXPERTS IN

Having fast lead times on custom door and frame products.

WHAT?

Spartan Doors off-site profiling takes the time and mess out of door hanging. The hardware cutouts are done during the manufacturing process on multi-axis CNC machines, ensuring perfect hardware preparation on every door.

Here are just some of the hardware preparations we can do off-site:

- Hinge cutouts with pilot holes
- Lock & mortice lock preparations
- Bottom & perimeter seal rebates
- Reed switch and power transfer routing
- Face recessing for door protection and kick plates

OFF-SITE PROFILING

Profiled door solutions for ease of installation

Our off-site profiling solutions will give you a clear advantage in today's ever-changing and competitive marketplace.

WHY?

Lower costs

Reduced mess

Improved finish

Time saving

Reduced risk

Site safety

HOW?

Off-site profiling can be added as an option to any of our supply proposals for doors and frames.

All we require is a hardware schedule to be sent with the other standard documents in the door package and we can add profiling as an option.

Once the project becomes live for us, we follow these standard steps:

1. Submit shop drawings for **CUSTOMER REVIEW**
2. Once shop drawings are approved, **SCHEDULE MANUFACTURING**
3. **QUALITY CHECK** the manufactured product
4. **ORGANISE DELIVERY** to site in coordination with the contractor
