SPARTANDOORS.COM.AU

COMPANY SUMMARY

Founded in 2002, Spartan Doors has developed into an efficient door manufacturer for standard and specialised projects.

Our fast, high quality products resulted in the company moving to a production facility twice its size in 2015, although continued growth means the company is developing land for an even larger facility. Through this we have expanded to work with and supply builders, carpenters as well as large private and government infrastructure projects. Our extensive product range includes fire proof doors, bullet proof doors, cyclone proof doors and blast doors. Our commitment to the lead time and quality of products, research and development, our team and environmental impact remain a priority to ensure the best product is delivered to the customer.

INDUSTRIES WE SERVE

- ✓ Healthcare
- ✓ Aged Care
- ✓ Education
- ✓ Government Housing
- ✓ Community Hubs
- ✓ Mining
- ✓ Energy
- ✓ Transport Infrastructure
- ✓ Transportable Buildings
- ✓ Defence

WHY SPARTAN DOORS?

OUR STRENGTHS

LEAD TIMES

We believe the key to our success in Australia is our fast lead times in a competitive industry. Therefore, we are constantly analysing and testing new methods to remain at the forefront for our customers. This is done through market research or purchasing equipment to increase our quality and output. Unlike our competitors, Spartan Doors has a history of producing custom frames and doors since its inception in Cardiff, New South Wales. This means we have the capability, knowledge and experience to consistently deliver a wide range of products to our customers.

RESEARCH AND DEVELOPMENT

Spartan Doors is constantly researching and experimenting with new methods to meet and exceed our customers requirements. Specifically, we analyse new fabrication techniques to combine with new products entering the industry. As a whole, Spartan Doors is currently developing land for a new manufacturing facility and will undergo ISO 9001 accreditation in 2021. Other developments in the company include the addition of new CNC machines for door and frame profiling as well as our first international project in Papua New Guinea. This demonstrates Spartan Doors commitment to research and development ensuring we continue to provide short lead time, high quality products.

OUR TEAM

In order to run a successful business you need a skilled and experienced team. Over the years Spartan Doors has assembled a world class team dedicated to delivering high quality products to our customers. Naturally, the development of these staff is important to the company, so Spartan Doors continues to establish close relationships with industry specific RTO's. We believe this is the best way for our staff to gain nationally recognised vocational qualifications. Furthermore, the company conducts regular industry training to uphold quality standards.

ENVIRONMENTAL IMPACT

Despite having the most efficient production system on the market, Spartan Doors strives for environmental sustainability. We offer our products and services to Green Star accredited projects and minimise company offcuts and waste within our in house operation. This allows us to mitigate environmental damage created from unnecessary production steps and transportation. We follow a strict criterion to recycle any waste where possible and if it cannot be recycled, Spartan Doors implements alternatives uses for the offcuts (such as packaging and donations) to align with the company's aim of sustainability.

WHY SPARTAN DOORS?

Spartan Doors has grown from a low volume manufacturer in New South Wales to supplying and delivering projects across Australia and now abroad. Our high quality products coupled with the fastest lead times in the industry is responsible for this growth.

Our capabilities, excellent team and experience makes Spartan Doors the right choice for your company. Below is a list of our door and frame capabilities with the relevant accreditations.
